

Installed IIS(WED SERVER) Successfully

The screenshot displays the QEMU (Winserver) interface, which is a virtual machine environment. The main window shows the Server Manager dashboard, indicating that the IIS (Internet Information Services) role has been successfully installed. The dashboard includes a 'QUICK START' section with a list of tasks: 1. Configure this local server, 2. Add roles and features, 3. Add other servers to manage, 4. Create a server group, and 5. Connect this server to cloud services. Below this, the 'ROLES AND SERVER GROUPS' section shows two roles: 'File and Storage Services' and 'IIS'. The 'IIS' role is highlighted, showing its components: Manageability, Events, Services, Performance, and BPA results. The 'Manageability' component is further expanded, showing 'Manageability' and 'Events'.

On the right side of the interface, there is a network diagram. It shows a 'Winserver' icon connected to a 'Net' icon. The 'Winserver' icon is labeled with the IP address '172.16.0.20' and the text 'NETFLIX'. The 'Net' icon is labeled 'Net'. Below the 'Winserver' icon, there is a 'DNS' icon labeled 'DNS' and '8.8.8.8'. The entire network diagram is enclosed in a dashed green box labeled 'DATACENTER'.

The bottom of the interface shows a taskbar with various application icons, including the Start button, Search, File Explorer, Edge, and several other utilities. The system clock indicates the time is 7:05 AM on 7/22/2026. In the bottom right corner, there is a 'Physical' button and a 'START' button.
